The **Coffee activator** is a system easy to install. You can simply attach it to your existing main water pipe from outside.

The **Coffee activator** works without electricity and chemistry. It reduces the surface tension of water by permanent magnetism and rises the viscosity of water.

Because of the changed water structure, deposits at pipes and heating elements diminish. The duration of life of your coffee maker and dishwasher gets longer.

The advantages of the Coffee activator:

- intensive coffee taste, because bitter substances can be better redrawed
- service intervals of devices can be extended
- longer duration of life of coffee makers and dishwashers
- glasses glister more
- reduction of cleaning agents and dishwashing liquids
- reduction of time needed for cleaning
- diminishment of lime and ferric deposits
